

Claude Enterprise: API Comparison Matrix

Comparing the Analytics API and Compliance API for security, compliance, and governance use cases.

● Analytics API ● Compliance API

Capability / Dimension	Analytics API	Compliance API
Access & Setup		
NDA required	No	Yes Via Anthropic Trust Center
API key type	read:analytics Scoped analytics key	read:security Scoped security key
Who can enable	Primary Owner	Primary Owner
Setup effort	Minutes Toggle + create key	Half day NDA + integration
Additional cost	Included With Enterprise plan	Included With Enterprise plan
Usage & Adoption Insights		
DAU / WAU / MAU tracking	Yes	No
Seat utilization Assigned vs. active vs. pending invites	Yes	No
Project-level breakdown Per-project users, conversations, messages	Yes	No
Claude Code metrics Commits, PRs, LOC, sessions, tool actions	Yes	No
MCP connector usage Which connectors, by whom, frequency	Yes	Partial Connection events only
Skill usage tracking	Yes	No
Web search invocation count	Yes	No
Security & Audit Logging		
Login / logout events	No	Yes
API key lifecycle Creation, modification, deletion	No	Yes
Workspace membership changes	No	Yes
Account setting changes	No	Yes
Permission / access changes	No	Yes
File operations Upload, download, deletion events	No	Yes
Compliance Framework Support		
SOC 2 Type II evidence	Partial Usage data only	Yes Full audit trail
EU AI Act High-risk AI system transparency and logging	Partial Usage metrics only	Yes Audit trail for AI oversight

CAPABILITY / DIMENSION	ANALYTICS API	COMPLIANCE API
NIS2 Network and information security directive	Partial Access pattern visibility	Yes Incident detection and logging
PCI-DSS Payment card industry data security standard	No	Partial Access and change logging
ISO 27001 Information security management systems	Partial Asset and usage inventory	Yes A.12 operations security evidence
OPERATIONAL CHARACTERISTICS		
Data freshness	3-day delay	Near real-time
Historical data availability	90 days From Jan 1, 2026	From enablement No retroactive data
Rate limits	60 req/min Adjustable via CSM	Per NDA docs
Unified org view Enterprise + API org in single feed	No Enterprise org only	Yes Parent org consolidation
SIEM export capability	Manual Build your own pipeline	Yes Designed for SIEM ingestion
SECURITY, MONITORING & COMPLIANCE USE CASES		
Shadow AI detection Identify unapproved connector or skill usage across the org	Yes Connector + skill endpoints	Partial Connection events only
Dormant account identification Find assigned seats with zero activity for deprovisioning	Yes Seat vs. active user delta	No
Privilege escalation detection Alert on unexpected permission or role changes	No	Yes Permission change events
API key hygiene monitoring Track key creation, unused keys, and rotation compliance	No	Yes Key lifecycle events
Insider threat indicators Unusual file download patterns or off-hours access	No	Yes File ops + login events
Cost attribution and chargeback Allocate usage-based billing to teams or departments	Yes Per-user + per-project data	No
AI adoption governance reporting Board-level reporting on AI rollout scope and velocity	Yes DAU/WAU/MAU + trends	Partial Event volume as proxy
Unauthorized workspace access Detect members added to restricted workspaces	No	Yes Membership change events
Configuration drift detection Monitor for unexpected org or account setting changes	No	Yes Setting change events
Third-party integration audit Verify only approved MCP connectors are active	Yes Normalized connector list	Partial Connection events
Data exfiltration signal Abnormal file download volume or pattern per user	No	Yes File download events
Periodic access review Quarterly attestation of who has access and what they used	Yes User activity + seat data	Yes Access and login history
Incident response support Reconstruct timeline of actions during a security event	Partial Daily aggregates only	Yes Event-level granularity
Regulatory audit evidence package Generate exportable evidence for external auditors	Partial Usage stats only	Yes Full audit trail export
Offboarding verification Confirm revoked access and no residual activity post-departure	Partial Check for zero activity	Yes Login + access removal events

API Endpoint Reference

Analytics API

Base URL: `https://api.anthropic.com/v1/organizations/analytics/`
Auth: `x-api-key` header with `read:analytics` scoped key

`GET` `/v1/organizations/analytics/users`

Per-user engagement metrics for a single day. Includes chat metrics, Claude Code metrics (commits, PRs, LOC, sessions, tool actions), connector usage, and web search counts.
Params: `date` (required), `limit`, `page`

`GET` `/v1/organizations/analytics/summaries`

High-level org engagement summary per day. DAU, WAU, MAU counts, assigned seats, and pending invites. Max 31-day range per request.
Params: `starting_date` (required), `ending_date`

`GET` `/v1/organizations/analytics/apps/chat/projects`

Usage broken down by chat project. Unique users, conversations, messages, creation date, and creator info per project.
Params: `date` (required), `limit`, `page`

`GET` `/v1/organizations/analytics/skills`

Skill usage across Claude chat and Claude Code. Unique users per skill, conversation counts, and remote session counts.
Params: `date` (required), `limit`, `page`

`GET` `/v1/organizations/analytics/connectors`

MCP connector usage across Claude chat and Claude Code. Normalized connector names, unique users, conversation and session counts.
Params: `date` (required), `limit`, `page`

Compliance API

Documentation: `trust.anthropic.com` (NDA required)
Auth: `x-api-key` header with admin API key

`GET` `/v1/organizations/activity`

Activity feed of security-relevant events. Filterable by time range, specific users, or API keys. Returns admin/system events and resource events.
Filters: `time range`, `user`, `API key`

Tracked admin/system events include:

Workspace membership additions and removals, API key creation / modification / deletion, account and org setting changes, permission and access control modifications, SSO and authentication events

Tracked resource events include:

File uploads, downloads, and deletions, skill creation and deletion, resource access modifications, entity access changes

Full endpoint schemas, event type enumerations, pagination details, and response formats are available in the Compliance API documentation on the [Anthropic Trust Center](#) after NDA signature. Organizations with both Claude Enterprise and Claude API tenancies can consolidate under a single parent org for unified monitoring.

 Neither API provides access to conversation content

The Analytics API returns aggregated usage counts only (number of conversations, messages, sessions, etc.). The Compliance API logs administrative actions and resource events but explicitly excludes inference activities. Neither API exposes, exports, or provides access to user prompts, model responses, conversation threads, or any other interaction content. All data available through both APIs is limited to metadata and event-level telemetry.

Analytics API

Best for FinOps, IT admins, and team leads who need usage visibility, seat optimization, cost attribution, and adoption reporting. Quick to enable, no NDA required. Five public endpoints covering users, summaries, projects, skills, and connectors.

Compliance API

Best for security, legal, and compliance teams in regulated industries who need audit trails for access events, configuration changes, and file operations. Requires NDA via [Anthropic Trust Center](#).
